Biomedical Sciences Pre-dental Enhancement Program

Chairperson: David Baker, Ph.D.

In partnership with the Marquette University School of Dentistry, the Department of Biomedical Sciences in the College of Health Sciences offers a pre-dental enhancement program.

This non-degree program is designed to help students build a more competitive dental school application in 12 months. The program is for students who already have a significant scientific background but seek to strengthen their academic resumes by taking an intensive pre-dental curriculum that includes graduate- and professional-level biomedical course work and exposure to the dental field.

This is a unique opportunity, which not only enhances academic credentials, but also emphasizes the growing public health concerns within the field of dentistry and includes service learning experiences, as well as community health-oriented courses. The program not only brings together the academic and clinical strengths of the Department of Biomedical Sciences and the School of Dentistry, but also educates students about social justice issues in health care and dental health disparities.

Therefore, this program both prepares future health professionals and develops men and women for others who can champion social change in health care.

The program is an intensive, 12-month curriculum with an emphasis on courses that strengthen a student’s academic skills and knowledge of the dental health profession, such that they are well positioned for success in dental school.

The exposure to public health related courses and the service learning experiences are designed to increase students’ awareness and understanding of the challenges and values of diverse and under-served populations. These opportunities are aligned with the increasing involvement of dental schools, including the Marquette University School of Dentistry, in public health dentistry.

- Participation in an intensive pre-dental curriculum that includes graduate- and professional-level biomedical course work and immersion in the dental field through the Marquette University School of Dentistry.
- Personal pre-dental advising that focuses on student success, career advising, assistance with the dental school application process and interview techniques.
- Opportunities for students who meet program standards to receive interviews with the Marquette University School of Dentistry with the possibility for entry upon completion of the program without an additional gap year.

Program Qualifications

A qualified applicant to our Biomedical Sciences Pre-Dental (BMPD) enhancement program would already meet minimum qualifications to apply to dental school but needs to strengthen their academic preparation.

Criteria:

1. Completion of all prerequisite course work for dental school admission.
2. Obtained competitive scores on the Dental Admissions Test (DAT) (typically a score of 17 or higher, academic average and all subscores, achieved prior to the start of the program).
3. Have an academic background that is enriched by and not redundant with the program’s curriculum.
4. Have a minimum GPA of 2.750 (based on performance in all undergraduate and post-graduate courses). An applicant with a lower GPA, but who is a strong candidate based on a holistic review of the application, may be considered for admission on probation status.

Application requirements include submission of official transcripts from all colleges/universities attended; DAT scores (may be copies that were sent to you); and 3 letters of recommendation. An applicant may request to have application reviewed without DAT scores, but if accepted, a student must have a competitive DAT score by the start of the program.

As an enhancement program, students in the BMPD do not qualify for financial aid. Financial assistance may be available for selected applicants from under-represented backgrounds.
# Biomedical Sciences Pre-Dental Enhancement Program

A course of study that is a pre-dental enhancement program consisting of three terms of study (summer, fall and spring). This program is not eligible for Title IV federal aid.

## Required Course Work:

**Biomedical Sciences Core**: Students are required to take a minimum of two science courses in the summer term, four science courses in the fall term, and two science course in the spring term. Science content includes anatomy, nutrition, pathology, physiology, genetics, microbiology, biochemistry, embryology, endocrinology, neuroanatomy, and pharmacology.

**Professional Development Core**: Prepares students for a successful application to dental school or other graduate/career path upon completion of the program. Content includes personal statement writing, resume development, interview skills and other aspects of career development.

**Public Health and Health Policy Core**: Prepare students with the knowledge and cultural competency skills and encourage a personal commitment to serve underserved patients in order to decrease health disparities are key goals of the program. Students therefore not only enhance their academic credentials but also gain valuable experience working with underserved populations that make them both more competitive applicants to dental schools and more empathetic, culturally competent dental health care providers.

**Total Credit Hours**: 41

To remain in good academic standing and enrolled in the program, students are required to meet a minimum term GPA of 2.400 and C or better in all course work.
Courses

BISC 7001. Principles of Dentistry. 1 cr. hr.
Surveys the dental profession from the perspectives of participating clinicians, residents and students. Included is an introduction to clinical specialties, procedures, practice settings, as well as alternatives to clinical practice. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7002. Dental Health and Society. 1 cr. hr.
An introduction to the field of dentistry with an emphasis on how it can impact an individual’s overall health and address dental health disparities in the country. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7005. Professional Development 1. 0 cr. hrs.
Designed to focus on and improve the skills necessary for a successful application to dental school or other graduate/career path upon completion of the program. Focuses on the application building aspect within career development. SNC/UNC grade assessment. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7006. Professional Development 2. 0 cr. hrs.
Designed to focus on and improve the skills necessary for a successful application to dental school or other graduate/career path upon completion of the program. Focuses on the interview skill aspect of career development. SNC/UNC grade assessment. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7007. Professional Development 3. 0 cr. hrs.
Designed to focus on and improve the skills necessary for a successful application to dental school or other graduate/career path upon completion of the program. Focuses on the transition from the post-baccalaureate program to the student's future goals. SNC/UNC grade assessment. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7021. Medical and Dental Terminology. 1 cr. hr.
Provides a foundation for the understanding and use of common terminology in the medical field, with particular emphasis on dentistry. Designed to introduce basic prefixes, suffixes, and word roots, and their combining forms, as well as advanced clinical terminology specific to the dental profession. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7130. Human Gross Anatomy. 5 cr. hrs.
A human gross anatomy course including lecture and a cadaver dissection laboratory. Anatomy of the limbs, back, thorax, abdomen, pelvis, and head and neck is approached on a regional basis. Lectures emphasize regional anatomical relationships, functional aspects of the systems, and provide a guide to the dissections. Applies toward the Anatomy and Systems Content Area, but only 3 of the 5 credits apply toward the 33 credits required for the major. Additional lab fee applies. Prereq: PHTH, PHAS or OCTH major.

BISC 7150. Outbreaks, Epidemics and Pandemics. 3 cr. hrs.
Through case studies, discussion, and group work, students develop an understanding of how infectious disease epidemics occur, what can be done to control them and why control efforts succeed or fail. By exploring the characteristics of pathogens and human hosts that contribute to disease spread, students gain the knowledge and skills to understand the implications of newly emerging pathogens and are able to advocate for what needs to be done to prevent outbreaks. Applies toward the Diseases and Pathology Content Area. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7153. Epidemiology. 3 cr. hrs.
An introduction to the basic concepts of epidemiology. The distribution and determinants of diseases in specified populations and the application to control of health problems. Emphasizes epidemiologic study designs for investigating associations between risk factors and disease outcomes. Epidemiological approaches evaluate health services, population health and policy. Applies to either the Health and Society cognate or the BISC major electives, but not both. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7157. Global Health. 3 cr. hrs.
Disease knows no borders. The health of populations in one country can be affected by public health threats or events across the globe. Policy decisions made in a country regarding public health could impact the health of people beyond its borders. Globalization shapes public health challenges and has profound influence on the capacities of countries to respond to health threats that often lie outside the control of any nation and outside health sector. Simply, globalization on health and the transfer of health threats exist. Opportunities across national borders could be utilized to solve global health challenges. Learners are introduced to the world’s vast diversity of determinants of health and disease. Learners have an opportunity to critically appraise health systems in different parts of the world. Learners analyze current and emerging global health priorities, including infectious diseases, poverty, conflicts and emergencies, health inequity, principles and impact of health systems reforms, and major global initiatives for disease prevention and health promotion. Explores an understanding of a global health system and its shortcomings, challenges and ways of addressing global public health challenges. Importantly, helps learners to develop skills in critical thinking and problem solving in relation to health issues that gross geographical boundaries. Can apply to either the Health and Society cognate, or the BISC major electives, but not both. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7159. Public Health Program Planning, Implementation and Evaluation. 3 cr. hrs.
Offers insight on careful planning and evaluation of public health programs, essential competencies for public health professionals. Presents concepts of health equity and health promotion, identifying health problems in community settings, developing programs and identifying activities. With an outcome focus, students are challenged to initiate project ideas that consider the needs of communities, engage relevant stakeholders and incorporate community centered activities. By use of planning and evaluation frameworks, learners utilize tools to monitor program progress and evaluate short-, medium- and long-term success. Prereq: Cons. of instr.
BISC 7160. Foundations in Public Health. 3 cr. hrs.
Exploration of select public health issues with an emphasis on dental health disparities. Service learning experiences are incorporated to further the student's integration of public health issues with the dental profession. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7180. Clinical Neuroanatomy. 3 cr. hrs.
Fundamental neurocranial anatomical information essential to the practice of medicine. Students develop a 3-dimensional understanding of neurocranial structures, and their relationships, with an emphasis on critical thinking through clinical problem solving. Prereq: PHAS major or cons. of instr.

BISC 7213. Clinical Biochemistry. 4 cr. hrs.
Examines biochemistry of human cells. Examines the chemistry of amino acids, proteins, carbohydrates, lipids, and nucleic acids. Explores the metabolism and metabolic regulation of these molecules, and their interaction with disease states. When necessary, compares and contrasts human biochemistry with that of bacterial cells. Prereq: General and organic chemistry and enrolled in the BISC pre-dental enhancement program.

BISC 7215. Clinical Microbiology with Lab. 4 cr. hrs.
Focuses on the general biology of bacterial, viral, fungal and parasitic pathogens of human medical importance and the response of the human host. Laboratory sessions reinforce content from lectures and introduce students to laboratory skills including isolation, cultivation, enumeration, and characterization of bacteria of human medical importance. Utilizes Brightfield microscopy. Specialized techniques include antibiotic susceptibility testing, anaerobic cultivation, biochemical tests and immunological assays. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7220. Medical Pharmacology. 3 cr. hrs.
Fundamentals of human pharmacology and basic principles dictating drug actions within the human body, with emphasis on applications in general medicine. Focuses on the therapeutic actions and clinical applications of various drug classes. Topics include cellular mechanisms, physiological responses, adverse reactions, drug-drug interactions, and clinical indications, accompanied by discussion on the pathological conditions for which common therapeutic agents are used. Applications of pharmacology commonly encountered by physician assistants are presented and are reinforced through interactive clinically-correlated lectures presented by practicing physicians and physician assistants. Prereq: PHAS major.

BISC 7230. Medical Anatomy. 6 cr. hrs.
The study of human gross anatomy, including a cadaver dissection laboratory. Anatomy of the limbs, back, thorax, abdomen, pelvis, and head and neck is approached on a regional basis, with a special focus on fundamental neuroanatomical information in a clinical context. Lectures emphasize regional anatomical relationships and functional aspects of the systems and provide a guide to the dissections. The ultimate objective is to attain a detailed understanding of structure-function relationships in the human body that underlie the practice of medicine. Prereq: PHAS major.

BISC 7235. Principles of Dental Gross Anatomy. 3 cr. hrs.
Provides students with a foundation in human anatomy, with focus on regions most relevant to dental medicine. Emphasizes correlations between structure, function, and clinical application. Includes laboratory. Prereq: Enrolled in the BISC pre-dental enhancement program.

BISC 7410. Microbiology. 4 cr. hrs.
Focuses on infectious agents of human medical importance and on the host pathogen interaction. Topics include the general characteristics of bacteria, viruses, fungi and parasites as well as the etiology, pathogenesis, laboratory identification and epidemiology of selected diseases. Discusses control of microorganisms in terms of sterilization, disinfection, chemotherapy and immunization. Discusses the immune system and the immune response. Applies toward the Cell and Molecular Content Area. Prereq: School of Dentistry.

BISC 7514. Human Microanatomy. 4 cr. hrs.
A study of the microscopic structure of cells, tissues and organs of the human body. Emphasizes structure-function relationships and on the interaction of various cell types, tissues and organ systems. Includes laboratory. Applies toward the Anatomy and Systems Content Area. Prereq: School of Dentistry only.

BISC 7515. Biomedical Systems 1. 3 cr. hrs.
Provides an introduction to human anatomy of the head and neck region. Topics include the skull, temporomandibular joint, muscles of mastication and facial expression and an overview of the orbital and cervical regions. Structural and functional relationships between the cranial nerves and central neuroanatomical pathways are presented along with selected clinical correlations. Begins to build the foundational knowledge of the biomedical systems that is necessary for dental students as they start patient rounds during the first semester. Applies toward the Anatomy and Systems Content Area. Prereq: School of Dentistry only.

BISC 7516. Biomedical Systems 2. 4 cr. hrs.
A human gross anatomy course for dental students that integrates lecture with a cadaver dissection laboratory. Follows the neurocranial anatomy course with expanded topics and detailed dissections of the head and neck regions. Lectures and dissections of the thorax, abdomen and pelvis, along with lectures on the upper and lower extremities are included. Part of a biomedical systems course sequence integrating anatomy, physiology, pathology, and dental clinical correlates. Additional lab fee applies. Prereq: School of Dentistry only.

BISC 7517. Biomedical Systems 3. 4 cr. hrs.
Module 3 of a systems-based course integrating anatomy, physiology and pathology including dental clinical correlates. Prereq: School of Dentistry only.

BISC 7518. Biomedical Systems 4. 4 cr. hrs.
Module 4 of a systems-based course integrating anatomy, physiology and pathology including dental clinical correlates. Prereq: School of Dentistry only.
BISC 7520. Dental Pharmacology. 4 cr. hrs.
Fundamentals of human pharmacology and basic principles dictating drug actions within the human body with emphasis on applications in dentistry. Focuses on the therapeutic actions and clinical applications of various drug classes. Topics include: cellular mechanisms, physiological responses, adverse reactions, drug-drug interactions, and clinical indications, accompanied by discussion on the pathological conditions for which common therapeutic agents are used. Applications of pharmacology commonly encountered by dentists are presented and are reinforced through interactive clinically correlated lectures presented by dental professionals. Prereq: School of Dentistry only.

BISC 7550. Remediation. 6 cr. hrs.
Variable credits. Variable titles. 0 credit will be SNC/UNC grade assessment; 1-6 credits will be graded. Prereq: Cons. of dept. ch. only.

BISC 7931. Topics in Biomedical Sciences. 1-3 cr. hrs.
Selected topics in biomedical sciences. Specific topics will be designated in the Schedule of Classes.

BISC 7995. Independent Study in Biomedical Sciences. 1-6 cr. hrs.
Research on a selected topic under the direction of a faculty member of the Department of Biomedical Sciences. Can be taken for a maximum total of 6 credits, maximum of 3 credits can be applied towards BISC major.

BISC 9002H. Honors Student Study/Research Placeholder in Biomedical Sciences. 0 cr. hrs.
Used to enroll a honors student who is not enrolled in the term, but is on campus for an educational experience other than academic credit, such as work in a lab or clinic. Used for tracking purposes only. SNC/UNC grade assessment. Prereq: cons. of dpt. ch.
